soil stabilization. In the following years, both plants will likely be used to supply structural concrete for the CMRR-NF.

The TA-48/55 concrete plant action has previously been evaluated for NEPA compliance and cultural and biological resources impacts, and actions have been identified and will be followed to avoid impacts to nearby cultural and biological resources. NNSA determined that the TA-48/55 concrete plant action was adequately considered in the CMRR EIS impact analyses and that no further NEPA analysis was necessary. The use of a similar site at TA-63/46 has also been previously evaluated for NEPA compliance and cultural and biological resources impacts, and actions have been identified and will be followed to avoid impacts to nearby cultural and biological resources. NNSA determined that the TA-63/46 concrete plant action was eligible for categorical exclusion from the need to prepare any further NEPA impact analyses documents (10 CFR 1021, Appendix B1.15; DOE 2008a; LANL 2008c; LANL 2007d).

Move NMSSUP Security Perimeter Fence (Planned Action)

Responding to an NNSA directive, the CMRR Project will coordinate with NMSSUP to temporarily relocate a portion of the TA-55 Perimeter Intrusion Detection Assessment and Delay System (PIDADS) fence during the CMRR-NF construction activities. This action is needed to allow access to the TA-48/55 laydown areas and the CMRR-NF construction site while maintaining a security perimeter during construction. In addition, this action creates space to allow the Project to provide construction craft worker break trailers, a nurses station, and delivery access for construction materials. The CMRR Project will move an estimated 600 feet of the south PIDADS fence northward up to 200 feet. In the final constructed configuration, the PIDADS fence will be to the south and east sides of the CMRR-NF, thus enclosing the CMRR-NF within a special security perimeter. The area affected by this action is included in the TA-48/55 laydown areas discussed above.

The relocation of the NMSSUP Security Perimeter Fence action has previously been evaluated for NEPA compliance and cultural and biological resources impacts, and actions have been identified and will be followed to avoid impacts to nearby cultural and biological resources. Although relocation of the PIDADS fence was not specified in the CMRR EIS impact analyses for the laydown area, the area affected by this action was analyzed in the CMRR EIS for impacts associated with using the site for CMRR Project construction and this included the extension of the existing PIDADS to enclose the CMRR-NF. NNSA determined that the similar temporary relocation of the NMSSUP Security Perimeter Fence was eligible for categorical exclusion from the need to prepare any further NEPA impact analyses documents (CFR 1021, Appendix B1.15; DOE 2010d; DOE 2008a).

Temporary Power Upgrades (TA-55 to TA-05) (Proposed Action)

The CMRR Project will upgrade temporary power services for the CMRR-NF construction site and support activities. The Project proposes to bring in temporary power along a route from the CMRR-NF site (at TA-55) along Pecos
